OFFICIAL SYSTEM & USER GUIDE

Stass Practice Management System & Client Portal

A Complete, Plain-English Manual to Every Feature, Safety Rule, and Daily Workflow in the Firm's Legal Platform

System Name	**Stass** (Practice Management System & Client Portal)
Intended Audience	New Joiners, Lawyers, Partners, Accounts, Compliance, HR, and System Learners
Style & Tone	Plain English, simple sentences, easy-to-understand explanations
Regulatory Alignment	SRA Accounts Rules, UK GDPR, AML 2017, UK Sanctions List, Home Office RTW
Architecture	Next.js (Web Frontend) + NestJS (Secure API) + PostgreSQL (Locked Database)
Document Version	Version 1.0 (Comprehensive Edition — October 2026)

How to use this manual: You do not need to be a software engineer to understand this guide. Every concept is explained step by step, using real-life examples from a modern law firm. Read through to learn the entire system or jump to the chapter you need.

Table of Contents

1. Welcome to Stass: The Big Picture
2. How the System is Built (3 Parts)
3. User Roles: Who is Allowed to Do What
4. Signing In & 2-Factor Security (2FA)
5. Managing Clients: People & Companies
6. Matters: The Legal Cases We Work On
7. Conflict of Interest Checks
8. Client Onboarding & Engagement
9. Documents: Encrypted & Scanned Files
10. Tasks: Organising Daily Legal Work
11. Notifications & Privacy-Safe Emails
12. Finance: Client Money & SRA Rules
13. Compliance, Anti-Money Laundering & Sanctions
14. People & HR (Safe Staff Records)
15. AI Legal Drafting Assistant
16. The Client Portal (Client Experience)
17. Quick Start Guide & Local Testing
18. Glossary of Everyday Terms

CHAPTER 1

Welcome to Stass: The Big Picture

What is Stass?

Stass is the computer system that powers our law firm. It is both a **Practice Management System** (for our staff, lawyers, accounts, and managers) and a **Client Portal** (for our clients to check their cases and download files).

What problems does Stass solve for us?

- **Keeps everything in one tidy home:** Client records, case files, emails, letters, money, and to-do lists are kept safely in one system.
- **Stops mistakes before they happen:** In a law firm, making a mistake with client money or forgetting a conflict check can lose a solicitor their licence. Stass has automatic safety guards that stop rules from being broken.
- **Protects client secrets:** A client's private information is locked away so that only the lawyers working on that specific case can see it.
- **Gives clients peace of mind:** Clients can log in from home to see how their case is progressing and read documents in a secure portal.

> **The First Golden Rule of Stass: Changes Keep a History**
>
> Day-to-day corrections do not silently rewrite important records. If you make a typo on a financial entry, you create a linked correction. If a document was added to the wrong case, it is withdrawn with an explanation. Records may still be disposed of through the controlled retention process when policy and law allow it.

> **The Second Golden Rule: Real Security at the Door**
>
> Hiding a button on a web page is not real security. In Stass, every single security check happens on the secure server and inside the database. Even if someone tried to bypass the web page, the server strictly refuses any request that does not follow the rules.

CHAPTER 2

How the System is Built: The Three Parts

To understand Stass easily, think of it as a **traditional, secure law firm office building** with three distinct areas:

1. The Reception Desk

This is what you see in your web browser. It is pleasant, fast, and easy to use. It displays buttons, tables, and forms.

Key Fact: The reception desk holds zero secrets. It never talks directly to the vault. It only passes messages to the Security Office.

Built with: Next.js & React

2. The Security Office

Every single click or action travels here first. The security office asks: "*Who are you? What role do you have? Are you working on this case? May you see this document?*"

Key Fact: If a required check fails, the request is refused. Security-relevant actions and successful record changes create protected audit entries.

Built with: NestJS (Node.js API)

3. The Locked Vault

This is where all the valuable records, client details, money ledgers, and documents are kept under heavy lock and key.

Key Fact: Files are encrypted so that nobody can read them directly from the disk. Only the Security Office has the key.

Built with: PostgreSQL & Encrypted Storage

Why do we separate them?

If a burglar breaks a window at the reception desk (a browser bug), they still cannot reach the files in the vault. They would have to get past the Security Office, which verifies every single request individually.

CHAPTER 3

User Roles: Who is Allowed to Do What

Not everyone in a law firm should see everything. For example, an IT administrator should not be reading a client's private divorce papers, and a lawyer should not be approving their own bank payouts. Stass separates people into clear **Roles**:

Role Name	Who This Person Is	What They Can & Cannot Do
Administrator	IT staff and technical managers who set up accounts.	**Can:** Invite staff, manage system settings, fix technical issues. **Cannot:** Read client case files or view financial accounting ledgers.
Partner	Senior lawyers who own or lead the firm.	**Can:** Supervise matters, clear conflicts of interest, take over unassigned clients, approve firm policies. **Cannot:** View matters they are not assigned to (holding the partner role alone opens no cases!).
Fee Earner	Solicitors, legal executives, and caseworkers.	**Can:** Create clients, open matters, draft tasks, upload files, record time spent on cases. **Cannot:** Approve payments, clear conflicts, or change firm compliance settings.
Accounts	Finance and cashier staff.	**Can:** Post receipts, prepare bills, import bank statements, match payments, reconcile ledgers. **Cannot:** Touch legal casework or read private legal strategy notes.
Compliance	Risk officers (COLP, COFA, MLRO, Nominated Officers).	**Can:** Review anti-money laundering checks, screen against the UK Sanctions list, inspect files for audits (with a recorded reason), handle confidential reports. **Cannot:** Work on legal cases without leaving an audited trail.
People / HR	Human resources specialists.	**Can:** Keep employee records, verify right-to-work, record annual leave, handle fair grievance cases. **Cannot:** View client legal records or firm client accounts.
Client	The person or company paying for legal help.	**Can:** Sign in to their dedicated portal, see who is working on their case, download documents shared with them, view payment requests. **Cannot:** See internal notes, tasks, conflict checks, or any other client's file.

Important Rule: The "Need to Know" Layer

Just because you are a Solicitor or a Partner does *not* mean you can see all cases in the firm! You can only open a matter if you are an **active member of that matter's team**. This protects client confidentiality even inside the firm.

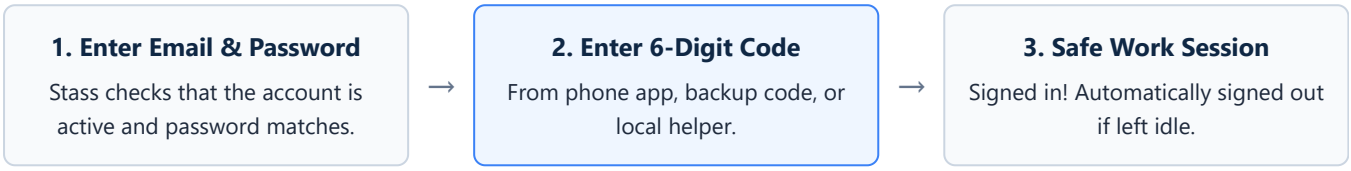

CHAPTER 4

Signing In & Two-Factor Security (2FA)

Passwords alone are not enough to protect a law firm from hackers. That is why Stass uses **Two-Factor Authentication (2FA)** for everyone — both staff members and clients.

How the two steps work:

1. **Step 1: Something you know** — Your work email address and your private password.
2. **Step 2: Something you have** — A 6-digit security code that changes every 30 seconds.

Ways to Get Your 6-Digit Code

- **Authenticator App:** An app on your smartphone (like Google Authenticator or Microsoft Authenticator) that shows a 6-digit number.
- **Emergency Backup Codes:** A printed list of single-use codes given when you first set up your account. Each code works once and is then crossed off.
- **Local Testing Helper (`code.bat`):** When testing on your computer, double-clicking `code.bat` instantly displays the current 6-digit code!

Automatic Sign-Out (Session Timeouts)

If you walk away from your desk, Stass protects your screen:

- **Staff sessions:** Automatically signed out after **30 minutes** of inactivity.
- **Client portal sessions:** Automatically signed out after **15 minutes** of inactivity.
- **Instant shutoff:** If an account is disabled or an email address changes, all active sessions end immediately.

CHAPTER 5

Managing Clients: People & Organisations

A client is the person or business that hires our law firm. In Stass, every client receives a permanent reference number (such as `C-000001`) that stays with them forever.

Two Kinds of Clients

Individual Clients

Real human beings. Stass records their title, given name, family name, date of birth, contact email, telephone, and postal address.

Organisation Clients

Companies, partnerships, LLPs, charities, and trusts. Stass records the company name, type, registration number (e.g. Companies House), and registered address.

Client Contacts

You cannot speak directly to a company building; you speak to the people who work there! For organisation clients, Stass records **Contacts** (such as the Managing Director, Financial Officer, or In-House Solicitor).

- Each contact has their own name, job title, email, and phone.
- If a contact leaves the company, we mark them *inactive*. We never delete their history.

The Responsible Person & Client Takeover

Every client has one **Responsible Person** (usually the lawyer who brought them in).

- Only the Responsible Person and the team members assigned to the client's cases can see full client details.
- **What happens if the lawyer leaves the firm?** A Partner can perform a **Client Takeover**. The Partner must write an official reason why they are taking over. The system logs the change so that no client is ever lost or neglected.

> **Safe Client Searching**
>
> When staff search for existing clients, the search screen shows *only* the reference number, type, and name. It does not show private phone numbers, home addresses, or matter details until permission is verified.

CHAPTER 6

Matters: The Legal Cases We Work On

A **Matter** is a specific piece of legal work we do for a client. For example: buying a house at 12 High Street, handling a commercial lease, or drafting a will.

Almost everything in Stass hangs off a matter: documents, tasks, time entries, bills, and what the client sees in their portal!

How Matters Are Numbered

Every matter gets a clean, unique reference code made of the client reference plus a counter:

```
C-000123/001   (The client's first case)
C-000123/002   (The client's second case)
C-000123/003   (The client's third case)
```

Two lawyers opening cases at the exact same second will never get the same number because the database locks and numbers them safely.

Matter Types

Stass supports fixed legal categories so work is tracked cleanly:

- Residential Property (conveyancing)
- Commercial Property
- Family & Divorce
- Litigation & Disputes
- Employment Law
- Wills & Probate
- Corporate & Commercial
- Immigration
- Crime

The Matter Team

Every matter has a clearly defined legal team:

- **Supervising Partner:** Exactly one senior partner who is legally responsible for overseeing the case.
- **Fee Earners:** One or more solicitors, legal executives, or paralegals doing the day-to-day legal work.

> **Closing a Matter Safely**
>
> When the case is finished, the matter is **closed** with an explanation. It is not deleted. Stass refuses to close a matter while it still has an open task; finance records remain available after closure so accounts work can be completed safely.

CHAPTER 7

Conflict of Interest Checks: Protecting Integrity

What is a conflict of interest? In law, a firm cannot represent two people who are fighting against each other (for example, representing both the buyer and the seller of the same house, or both husband and wife in a divorce). Doing so is illegal and breaches professional ethics.

In Stass, you **cannot open a matter** without running an automated **Conflict Check** first!

1. Name the Parties
You type the names of the client, opponents, and opponent solicitors.

→

2. Stass Scans the Vault
The system searches every past client, matter, and opponent record.

→

3. Clean or Match?
0 matches = Matter opens. Matches found = Awaiting Clearance!

What Happens if a Potential Conflict is Found?

If the system finds that someone with that name was an opponent in a past case:

1. The matter is placed into a safety state called `awaiting_clearance`.
2. While awaiting clearance, **no work can be done**. No documents can be uploaded, no tasks can be created, and no time can be billed.
3. Only the **Supervising Partner** can clear the conflict. They must review the names and write an official explanation (e.g. "*John Smith is a common name; verified birth date proves this is a different individual*").
4. When cleared, the compliance team is automatically emailed, and the matter becomes `open`.

> **No Cheating the Conflict Check**
>
> The conflict check ID must be less than 24 hours old, must belong to the same client, and can only be used once. You cannot use yesterday's check for a new case.

CHAPTER 8

Client Onboarding & Engagement

Before a law firm can start doing serious legal work, a new client must be properly "onboarded." This means confirming who they are, agreeing on fees, and having them sign our terms of business.

The Onboarding Journey (Step by Step)

1. **Client Record Created:** Basic details entered.
2. **Email Verification:** A secure, one-time link is sent to the client's email. Clicking it proves they control that email inbox.
3. **Identity & Evidence:** The client provides their passport, driver's licence, or company registration certificate.
4. **Risk & Anti-Money Laundering Review:** Staff verify where the client's funds came from and confirm they are not on any sanctions list.
5. **Compliance Approval:** The Compliance team gives formal clearance to act.
6. **Client-Care Letter & Fee Agreement:** The firm sends engagement documents setting out the scope of work and hourly fees.
7. **Signature Review:** The client signs the agreement, and the lawyer confirms the signed document.
8. **Initial Deposit:** The client deposits any required money into the client bank account.
9. **Activation:** The matter is officially active and casework begins!

> **Firm Policies Library**
>
> Stass includes an immutable **Firm Policies** module. Compliance writes rules (like our Client Care Policy or AML Policy), Partners approve them, and all lawyers must click to acknowledge they have read them.

CHAPTER 9

Documents: Encrypted, Scanned & Versioned Files

Lawyers handle sensitive files: contracts, deeds, medical evidence, and court orders. Stass treats document safety as top priority.

1. Automatic Virus Scanning (ClamAV)

Every single file uploaded to Stass is scanned by an antivirus engine (ClamAV) *before* it is saved to the disk.

- If a file is infected with malware, Stass refuses it immediately, discards it, and sends an urgent email alert to Compliance.
- If the virus scanner is offline or broken, Stass refuses all uploads. **No unscanned file is ever stored.**

2. Strong Military-Grade Encryption (AES-256-GCM)

Once scanned, the file is encrypted using a unique, random encryption key. Even if a thief stole the firm's physical backup hard drives, they could not open or read a single word of any document!

3. Safe File Formats Only

To prevent malicious software, Stass only accepts clean, modern formats: PDF, Word (`.docx`), Excel (`.xlsx`), PowerPoint (`.pptx`), Plain Text, Images (PNG, JPEG), and Emails (`.eml`). Macro-enabled files (which can contain computer viruses) are strictly blocked.

4. Version History: Nothing Overwritten

When you upload an updated draft of a contract, Stass does not overwrite the old file. It creates **Version 2**. Both Version 1 and Version 2 remain in the vault and can be downloaded anytime.

5. Withdrawing a Mistaken Document

> **What if I upload the wrong client's file by mistake?**
>
> You cannot delete it. Instead, you **withdraw** the document and type a reason (e.g. "*Uploaded wrong appendix by mistake*"). Withdrawing instantly hides the file from the case list, cuts off all client access, and blocks downloads, while preserving an honest audit trail.

6. Sharing Documents with the Client

By default, **every document starts internal/private**. Only when a lawyer deliberately clicks "*Share with client*" does the latest version appear in the client's portal.

CHAPTER 10

Tasks: Organising Daily Legal Work

In Stass, a **Task** represents real legal work that must be completed on a case (for example: "*File defence by Friday*" or "*Order local authority search*").

Task Rules

- **Tied to a Matter:** A task always belongs to exactly one matter. It is not an informal sticky note outside the case.
- **Assigned to Team Members:** A task can only be assigned to a lawyer or caseworker who is an active member of that matter's team.
- **Clear Details:** Each task has a Title, an optional Description, a Due Date (calendar date), Priority (Low, Normal, High, Urgent), and Status (Open, Completed, Cancelled).
- **Audit Trail:** If you reassign a task to a colleague, Stass records who reassigned it, when, and from whom.
- **Internal Only:** Tasks are for law firm staff only. Clients never see internal tasks in their portal.

> **Who can complete or cancel a task?**
>
> Only two people have authority to mark a task completed or cancelled:
> 1. The person currently assigned to the task.
> 2. The Supervising Partner for that matter.
>
> This ensures that work is not accidentally marked as done by someone unfamiliar with the case.

CHAPTER 11

Notifications & Privacy-Preserving Emails

Lawyers need to be alerted when work is assigned to them or when a deadline is approaching. However, standard email is not 100% private: emails can pop up on lock screens, get forwarded, or be stored on personal phones.

Stass solves this with a clever, privacy-preserving notification system:

1. The In-App Inbox

Inside Stass, staff have a personal notification bell/inbox. Here you see clear notices when a task is assigned to you, reassigned, or updated. If you are removed from a case, those notifications gracefully disappear from your list.

2. Automatic Due-Date Reminders

Stass automatically schedules reminders at 09:00 UK time:

- **7 days before** the due date (early warning)
- **1 day before** the due date (action tomorrow)
- **On the due date** (action today)
- **1 day overdue** (urgent reminder if still open)

3. Zero-Leak Email Design

> **Why Stass Emails Contain No Client Names**
>
> When Stass sends an email alert, it **never** includes the client's name, the case title, or the task description! Instead, it says:
> *"You have a pending task reminder in Stass. Please sign in securely to view your work."*
> This prevents sensitive legal secrets from ever leaking through external email servers.

CHAPTER 12

Finance: Client Money & SRA Accounts Rules

In England and Wales, law firm accounting is governed by the **SRA Accounts Rules**. The rules are strict because lawyers hold millions of pounds of other people's money. Breaking these rules can lead to criminal charges or firm closure.

The Most Important Rule: Two Kinds of Money

Client Money (Belongs to the Client!)	Office / Business Money (Belongs to the Firm!)
• Money held for a house purchase deposit. • Money held to pay court fees or stamp duty. • Money received from the other side in a settlement. **Must be kept in a dedicated Client Bank Account.** CAN NEVER BE USED FOR FIRM BILLS OR SALARIES!	• Fees earned by the firm after an invoice is issued. • The firm's own operating capital. • Used to pay staff salaries, office rent, and utility bills. **Kept in the Firm's Office Bank Account.**

Exact Pence Accounting

Computers sometimes make rounding errors with decimals (like `$10.0000001`). In Stass, all money is stored in **exact British pence** (e.g. £150.00 is stored as `15000`). There are zero rounding discrepancies.

Time Recording & Invoices

- Fee earners log their billable time in minutes, with a clear description and their billing rate.
- Invoices are generated with unique, sequential numbers, explicit VAT rates (20% standard, 5% reduced, 0% zero-rated, exempt, or outside scope).
- Mistakes are reversed with a formal **Credit Note**; an invoice is never silently edited or destroyed.

The Four-Eyes Principle (Payment Protection)

> **The Four-Eyes Rule: No One Pays Alone**
>
> To prevent fraud, whenever client money is paid out, Stass requires **Four-Eyes Approval**:
> 1. One authorised person enters the payment request with evidence.
> 2. A *second, different* authorised person must review and approve it.
>
> The person who asks for the payment **can never approve their own request!**

Five-Week Client Account Reconciliation

At least every five weeks, the accounts team imports bank statements, matches them against the internal ledgers, and the COFA (Compliance Officer for Finance and Administration) formally signs off on the reconciliation.

CHAPTER 13

Compliance, Anti-Money Laundering & Sanctions

Criminals often try to use law firms to "clean" dirty money or hide illegal wealth. The firm has a strict legal obligation under the **Money Laundering Regulations 2017** to stop this.

Customer Due Diligence (CDD)

Before doing business, we must verify:

- **Identity:** Who is the client? (Proof of ID and proof of address).
- **Beneficial Owners:** If the client is a company, who are the real human beings who own or control it (anyone holding 25% or more)?
- **Source of Funds & Wealth:** Where did the money actually come from? (e.g. savings from employment, sale of a property, inheritance).

Official UK Sanctions List Screening

Stass imports the official UK Government Sanctions List. Every client and party is screened against it automatically:

- If a match is found, Stass applies an immediate **Sanctions Hold**.
- All funds and transactions for that client are frozen until the Compliance Officer reviews the case. Handling funds for a sanctioned person without a government licence is a serious criminal offence.

The Compliance Gate

> **The Automatic Compliance Gate**
>
> The database itself enforces the Compliance Gate! If a matter does not have approved Anti-Money Laundering clearance, the database **blocks time recording, billing, document sharing, and money transfers**. Work cannot proceed in the dark.

Confidential Speak-Up Channel (Reporting Concerns)

Every staff member has a "*Report a Concern*" button in their navigation menu (`/report-concern`). If you see something suspicious:

- You can submit a confidential report directly to the MLRO (Money Laundering Reporting Officer).
- The system gives you a neutral receipt. It does *not* create public notifications, preventing any unlawful "tipping off" of the suspect.

CHAPTER 14

People & HR: Safe Staff Records

Employment records contain sensitive personal data: salaries, home addresses, right-to-work checks, sickness records, and disciplinary files.

Separation of Powers

In Stass, being a System Administrator does *not* give you the right to inspect employee HR files. The HR module is protected by its own distinct security authority.

Key HR Features

- **Right to Work Checks:** Records evidence prescribed by the UK Home Office (passports, share codes) before work begins, with reminder alerts before visas expire.
- **Annual Leave & Working Time:** Tracks holiday entitlement and approvals to ensure compliance with the Working Time Regulations 1998.
- **Continuing Competence (CPD):** Solicitors must maintain professional knowledge. Stass tracks learning plans, training courses, and reflections as required by the SRA.
- **Appraisals & Objectives:** Records annual goals and performance reviews.
- **Confidential Cases:** Grievance or disciplinary matters are restricted strictly to named investigators.

> **Privacy-Preserving Sickness Tracking**
>
> When an employee is off sick, operational managers need to know that the person is absent and what workplace adjustments are required. They **do not** need to see private medical diagnoses or doctor's clinical notes! Stass shields sensitive medical information, showing managers only the operational facts.

CHAPTER 15

AI Legal Drafting Assistant: Smart, Safe Assistance

Generative Artificial Intelligence (AI) can save hours of time by drafting letters, summarising long bundles, and creating case chronologies. However, in a law firm, using AI recklessly can cause catastrophic leaks or court penalties.

Stass includes a provider-neutral **AI Legal Assistant** with human review and confidentiality safeguards:

1. Solicitor Asks AI
e.g. "*Summarise these 5 emails into a timeline.*"

→

2. Approved Provider Boundary
The local build uses an offline mock. A production provider needs separate privacy and hosting approval.

→

3. Human Lawyer Reviews
Solicitor reads, checks facts, and signs off. AI never acts alone!

The Four Unbreakable AI Rules in Stass

1. **Human Lawyers Remain 100% Responsible:** The solicitor whose name is on the letter is legally responsible for everything in it. An AI cannot practice law, cannot give legal advice, and cannot be blamed for errors.
2. **Provider boundary:** The local build uses an offline mock provider and sends no client data to an external AI service. Any production provider must be separately approved and configured with appropriate privacy, retention, and training controls.
3. **Check for Hallucinations:** AI models can sometimes make up fake court case citations or hallucinate laws. Solicitors must verify all case citations against primary sources (like BAILII or legislation.gov.uk) before putting them in front of a judge!
4. **No Secret Machine Decisions:** AI is never allowed to decide whether someone gets fired, whether someone is guilty of money laundering, or whether a client is accepted. Humans make all decisions.

CHAPTER 16

The Client Portal: What Our Clients Experience

The **Client Portal** is the modern, friendly face of our firm. Clients can log in from their laptop or smartphone to stay updated without waiting on hold on the telephone.

How a Client Gets Access

- **Invitation Only:** There is no public registration form. A client only gets an account when their lawyer clicks "*Invite to portal*".
- **Sent Only to Verified Email:** The invitation goes strictly to the email address already on the official client record. A lawyer cannot type a random email on the fly.
- **Two-Factor Security:** Clients must also use a 6-digit security code from their phone when logging in.

What Clients Can See & Do

- **Case Overview:** See their active and closed cases, reference numbers, and the names of the solicitors handling their file.
- **Shared Documents:** Read and download documents that the legal team has explicitly shared with them.
- **Sign Engagement Letters:** Review and sign firm client-care agreements electronically.
- **Upload Evidence:** Upload requested documents (such as photo ID, utility bills, or bank statements).
- **Payment Requests:** View bills and payment instructions safely without fear of email interception scams.

> **Automatic Access Cut-Off**
>
> If a client contact leaves their company or is marked inactive, their portal access terminates **instantly on their very next click**. They cannot download another file, even if they were already logged in.

CHAPTER 17

Quick Start Guide: Running & Testing the System

If you are developing or testing Stass on your local computer, the entire system has been automated with simple one-click batch scripts.

How to Start and Stop Stass

Action	How to Run	What It Does
Start the App	Double-click `start.bat`	Starts PostgreSQL database, private file storage, antivirus scanner, NestJS API, and Next.js web app. Opens your browser automatically when ready!
Get 2FA Code	Double-click `code.bat`	Prints the current 6-digit security code for the demo account right on your screen.
Stop the App	Double-click `stop.bat`	Gracefully stops all background containers and servers while keeping your test data intact.

Important Web Addresses on Your Computer

- **The Stass Web App:** http://localhost:3000
- **Local Email Inbox (Mailpit):** http://127.0.0.1:8025 (Shows all invitations, password resets, and reminder emails sent by Stass without sending real internet emails).

Demo Login

The local demo email is `demo@practice.test`. Read `DEMO-LOGIN.txt` in the local project folder for its current password and other account details. That file is deliberately excluded from source control and must not be copied into shared documentation. Run `code.bat` to get the live 2FA code.

CHAPTER 18

Glossary of Everyday Terms

Term	Simple Explanation
Matter	One specific piece of legal casework done for a client (e.g. buying a property or drafting a contract).
Fee Earner	A lawyer, solicitor, or caseworker who does billable legal work.
Supervising Partner	The senior solicitor who oversees a matter and is legally accountable for the quality of work.
Conflict Check	An automated search to make sure the firm is not acting for both sides of an argument.
Client Money	Money belonging to the client (like a house deposit) held in trust in a separate bank account.
Office Money	The firm's own money, earned from fees, used to pay rent and wages.
Four-Eyes Principle	A safety rule requiring two different people to check and approve a payment before money leaves the bank.
AML (Anti-Money Laundering)	Rules and checks designed to stop criminals from using legal transactions to hide dirty money.
CDD (Customer Due Diligence)	Verifying who the client is, checking their identity documents, and confirming their business ownership.
Sanctions List	A government list of banned individuals and entities whose money must be immediately frozen.
SAR (Suspicious Activity Report)	A confidential report sent to the UK National Crime Agency if money laundering is suspected.
ClamAV	The built-in antivirus scanner that checks every file before it is allowed into Stass.
Withdrawing a Document	Hiding a mistakenly uploaded file from normal view and blocking downloads while keeping the audit trail intact.
2FA (Two-Factor Authentication)	Requiring both a password and a 6-digit phone code to log in, preventing hacker break-ins.

Congratulations! You now understand how the entire Stass Practice Management System works.
